-------- rectangular characteristics – phase current
         (fullstep / with boost)
         both phases with nominal current (bipolar)

·············· sinus-/cosinus characteristics – phase current
         (without boost)
         with peak value = nominal current (bipolar)

         e.g. SM 88.2.18M8
         with nominal current 8 A/phase bipolar
